Topic: SOCHUM / Human rights questions, including alternative approaches for improving the effective enjoyment of human rights and fundamental freedoms - the right to privacy in the digital age

Privacy in the digital age is a worldwide issue. After COVID, everyone went on social media. Some of these sites need you to put your personal information in. The information is then sitting in a file that can easily be hacked. In China, more than a million people's personal info got hacked and leaked. North Korea recently went through cyber attacks letting personal info out in the open.

During the time I was in SOCHUM, the BBC interviewed five people. Interviewing gave me deep insight about what is going on with digital privacy. During the time I interviewed delegates, I learned that the US reduces 2200 cyber attacks per day. China would eventually have to stop their people's private information getting leaked. North Korea is fighting for stronger international connections that can provide more privacy around the world.

SOCHUM's delegates are working on finding strong solutions that could help prevent private information from being leaked. With all of the delegates working together they could educate people and create a resolution to give their solutions the push it needs to stop people's privacy from being leaked.
